

Warm-Up: Tuesday 1/30/18

$$\textcircled{1} x^4 \cdot x^3 = x^7$$

$$\textcircled{2} x^{10} \cdot x^{13} = x^{23}$$

$$\textcircled{3} \frac{n^5}{n^2} = n^3$$

$$\textcircled{4} \frac{x^{15}}{x^{11}} = x^4$$

# Lesson 1.3: Growing, Growing Dots

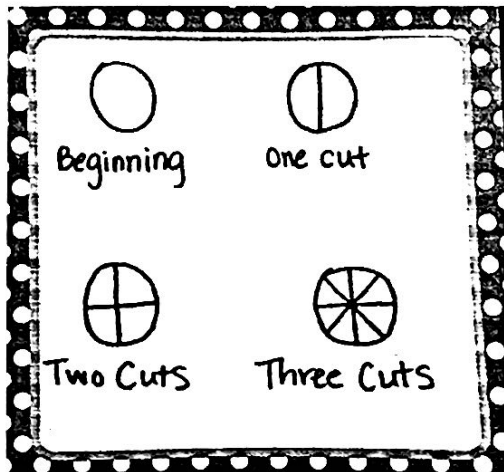

Table:

# of Cuts	Number of Pieces
0	1
1	2
2	4
3	8
4	16

Graph:

Recursive Formula:

$$f(n) = f(n-1) \times 2$$

Explicit Formula:

$$y = 1 \cdot 2^x$$

$$f(n) = 1 \cdot 2^n$$

	Explicit Equation	Recursive Equation																				
Type of thinking represented	Process that relates the input, $x$ , with the output, $y$ . In other words, the explicit equation can tell me "how many dots" there will be when I know the time.	How do I get from one term to the next? What is the pattern?																				
Example without notation	$y = 3x + 6$ OR $y = 3 \cdot 2^x$	current = previous + 3 ↓ ↓																				
Example using <u>function notation</u>	↓ $f(n) = 3n + 6$	$f(n) = f(n-1) + 3$																				
Using a table	<table border="1" style="display: inline-table; vertical-align: middle;"><tr><td style="padding: 0 10px;"><math>x</math></td><td style="padding: 0 10px;"><math>y</math></td></tr><tr><td colspan="2" style="text-align: center;">→</td></tr></table>	$x$	$y$	→		<table border="1" style="display: inline-table; vertical-align: middle;"><tr><td style="padding: 0 10px;"><math>x</math></td><td style="padding: 0 10px;"><math>y</math></td></tr><tr><td colspan="2" style="text-align: center;">↓ ↓</td></tr></table>	$x$	$y$	↓ ↓													
$x$	$y$																					
→																						
$x$	$y$																					
↓ ↓																						
Evaluating using <u>function notation</u>	<table border="1" style="display: inline-table; vertical-align: middle;"><thead><tr><th><math>x</math></th><th><math>y</math></th></tr></thead><tbody><tr><td>0</td><td>6</td></tr><tr><td>1</td><td>9</td></tr><tr style="border: 2px solid black;"><td>2</td><td>12</td></tr><tr><td>3</td><td>15</td></tr></tbody></table> ✓ $f(2) = 3(2) + 6$ $f(2) = 6 + 6 = 12$	$x$	$y$	0	6	1	9	2	12	3	15	<table border="1" style="display: inline-table; vertical-align: middle;"><thead><tr><th><math>n</math></th><th><math>f(n)</math></th></tr></thead><tbody><tr><td>0</td><td>6</td></tr><tr><td>1</td><td>9</td></tr><tr style="border: 2px solid black;"><td>2</td><td>12</td></tr><tr><td>3</td><td>15</td></tr></tbody></table> ✓ $f(2) = f(2-1) + 3$ ↓ = $f(1) + 3$ $f(2) = 9 + 3 = 12$	$n$	$f(n)$	0	6	1	9	2	12	3	15
$x$	$y$																					
0	6																					
1	9																					
2	12																					
3	15																					
$n$	$f(n)$																					
0	6																					
1	9																					
2	12																					
3	15																					
Advantages	Find the 100 <sup>th</sup> term easily	Very quickly find the NEXT term
